

Department of Zoology
World Leprosy Day

The Dept. of Zoology Conducted World Leprosy Day in the Department on 30.01.2024 to create awareness to students.

The theme for World Leprosy Day 2024 is "Beat Leprosy". This theme encapsulates the day's dual objectives: to eliminate the stigma associated with leprosy and to enhance the dignity of those affected by the disease.

The theme of "Beat Leprosy" serves as a forceful reminder of the importance of addressing leprosy's social and psychological components, in addition to medical efforts to eradicate the illness. It envisions a society in which leprosy is no longer a cause of stigma, but rather a chance to show compassion and respect for all people.
