

ROLE PLAY ON NANOBIO TECHNOLOGY

Nanobiotechnology is a new field of science that introduces special physiochemical and biological properties of nanostructures and their applications in various areas such as medicine and agriculture.

In viewing this the department of biotechnology has conducted an activity of role play on nanobiotechnology in the area of drug delivery system by lecturer- in-charge; Dr.B.Nageshwari and the faculty members Mrs.K.Anusha an Ms.I.Parnika Sai.

To enhance the ability to remember a typical procedure with out any stress in an easy way a methodology like role play is adapted.

And this role Play concentrated on things -**Nano particle, Drug delivery system, hydrogels, biomaterials, green nanofactories.**

ROLE PLAY ON NANOBIO TECHNOLOGY
