### About Niels Henrik Abel

**Niels Henrik Abel (5 August 1802 – 6 April 1829)**

He was a Norwegian mathematician who made pioneering contributions in a variety of fields. His most famous single result is the first complete proof demonstrating the impossibility of solving the general quintic equation in radicals. This question was one of the outstanding open problems of his day, and had been unresolved for over 250 years. He was also an innovator in the field of elliptic functions, discoverer of Abelian functions. He made his discoveries while living in poverty and died at the age of 26 from tuberculosis.

Most of his work was done in six or seven years of his working life. Regarding Abel, the French mathematician Charles Hermite said: "Abel has left mathematicians enough to keep them busy for five hundred years." Another French mathematician, AdrienMarie Legendre, said: "quelle tête celle du jeune Norvégien!" ("what a head the young Norwegian has!").

The Abel Prize in mathematics, originally proposed in 1899 to complement the Nobel Prizes, is named in his honour.
